

Visit safety

We have put in place a number of new safety measures to help protect you and our team during face to face visits.

Safety within our team

Our team will take their temperature every day and keep a log.

We have COVID-19 test kits should anyone in the team develop symptoms.

Before your visit

We will contact you and ask some questions to make sure the visit is safe to go ahead.

You will be asked to sign an electronic form to confirm you agree with our safety procedures.

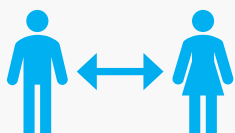

During your visit

All demonstration equipment will be disinfected before and after each visit.

Our team will wear gowns, gloves and masks and use hand sanitiser before and after each visit.

Please maintain social distancing throughout your visit.

We have screens and additional monitors for extra protection.

Please let us know immediately if you develop any Coronavirus symptoms prior to or up to two weeks after your visit.
